The quantum theory of relativistic particles was developed in close analogy with that of nonrelativistic ones. It is shown that the Hilbert-space for the states of a physical system can be derived immediately from experience.

Quantum theory demands that we get some of the properties of classical particles back into the waves. Doing that is what is going to visit problems upon us. It will lead us to the problem of indeterminism and then to very serious worries about how ordinary matter in the large is to be accommodated into quantum theory.
