In scientific terms, the evolutionary history and relationship of an organism or group of organisms is called phylogeny. Phylogeny describes the relationships of an organism, such as from which organisms it is thought to have evolved, to which species it is most closely related, and so forth. Phylogenetic relationships provide information on ...

It is essential to use at least two methods and to select the tree which best depicts the phylogenetic relation. For identification of fungi, rRNA markers of 18S, ITS1+5.8S+ITS2, ITS, and LSU 25–28S regions and D1/D2 26S rDNA spacer sequences are used (Hibbett et al., 2007; Porter and Golding, 2012).
