Crdi Engine

Common Rail Direct Injection (CRDi): Most modern engine's fuel systems use an advanced technology known as CRDi or Common Rail Direct Injection. Both petrol and diesel engines use a common 'fuel-rail' which supplies the fuel to injectors. However, in diesel engines, manufacturers refer to this technology as CRDi whereas Petrol engines term it as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI).

Common Rail Direct Injection - What is CRDi Technology ...

CRDi engines are advantageous in many ways. Cars fitted with this new engine technology are believed to deliver 25% more power and torque than the normal direct injection engine. It also offers superior pick up, lower levels of noise and vibration, higher mileage, lower emissions, lower fuel consumption, and improved performance.

CRDi engine | Working Of Common Rail Diesel injection System

CRDi or common rail direct injection system is a method of injection of fuel into the engine cylinders of petrol and diesel engines. In the engines, a high pressure common rail is used to inject the fuel in individual valves. In the modern generation engines this fuel injection system is used mostly because of technological advancement. In this method a common and single line is used to inject the fuel.

Common rail direct fuel injection is a direct fuel injection system for diesel engines. It features a high-pressure fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors. Third-generation common rail diesels now feature piezoelectric injectors for increased precision, with fuel pressures up to 2,500 bar. High pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection, by injecting fuel as a larger number of

The 1.4 L (1,396 cc) U diesel engine utilizes four cylinders and is made with cast iron block and aluminum cylinder head with chain driven DOHC with 4 valves per cylinder, Bosch common rail direct injection (CRDi), fixed geometry turbocharger (FGT) and intake air swirl control. It is a reduced stroke version of the 1.5L U series with Bore and Stroke at 75 mm × 79 mm (2.95 in × 3.11 in).

Reduced Emissions: CRDi diesel engine were developed out of necessity. A common problem that plagued older diesel engine was black soot-like smoke and horrible emissions. CRDi diesel engine produces significantly less smoke and tolerable emissions.

TDI Vs CRDi | Diesel Engines In India | Explained

Common Rail Direct Injection or CRDi CRDi is an intelligent way of controlling a diesel engine with use of modern computer systems. CRDi helps to improve the power, performance and reduce harmful emissions from a diesel engine. Conventional Diesel Engines (non-CRDi engines) are sluggish, noisy and poor in performance compared to a CRDi engine.

Hyundai diesels earlier had a bad name, thanks to the numerous issues with the Accent's triple-cylinder diesel. But then, it was Hyundai's first CRDi engine, and also the first CRDi engine in the mass market (only car with common-rail diesels before that in India was the Mercedes E-Class). Tata's first common-rail diesel was plagued with issues too.
